

FEATURES

- Small compact monitor
- Large backlit liquid crystal display
- Sensor can be mounted on a shaft or a wheel
- Two adjustable alarm points which are user programmable
- Indicates speed without interfering with vehicle operation
- Dimensions: 84mm x 60mm (3.3" x 2.4")

APPLICATIONS

- Fork lifts
- Industrial equipment
- All terrain vehicles
- Agricultural equipment

ACCESSORIES

- Hall effect sensor with 1 metre lead, connector and magnet
- Wiring harness
- Alarm options:
 - Flashing light
 - Horn/Siren
 - Buzzer

Speed Alert

The Datatron Speed Alert creates operator and pedestrian awareness of speeding forklifts and other industrial equipment via an audible alert or visual display. Your choice of horn, siren, buzzer and/or flashing lights as alarms.

Speed Alert

The Datatron Speed Alert is a microprocessor based speed indicator with two adjustable alarm points, that can be set to your workplace conditions for speeds up to 50kph(30mph). Applications include forklifts, industrial equipment, all terrain vehicles and agricultural equipment. The Datatron Speed Alert indicates that you are travelling at unsafe speeds and helps reduce the risk of accidents and damage goods.

HOW IT WORKS FOR YOU

When driven irresponsibly, forklifts and other equipment can kill or severely injure operators and/or pedestrians and cause substantial damage to goods. By installing the Datatron Speed Alert on your equipment you create an awareness of speed as an alarm of your choice will be activated once a predetermined speed has been exceeded. It is important to be aware of the speed of all industrial equipment as it requires substantial distance to come to a stop particularly when loaded. Heavy braking can cause a vehicle to tip over. Your choice of horn, siren, buzzer and/or flashing lights as alarms ensures a safer work place.

FEATURES

- Indicates speed without interfering with vehicle operation
- Small compact monitor
- Large backlit liquid crystal display
- Connection for 2 external alarms
- User programmable
- Sensor can be mounted on a shaft or a wheel
- Dimensions: 84mm x 60mm (3.3" x 2.4")

APPLICATIONS

- Fork lifts
- Industrial equipment
- All terrain vehicles
- Agricultural equipment
